Product Vision

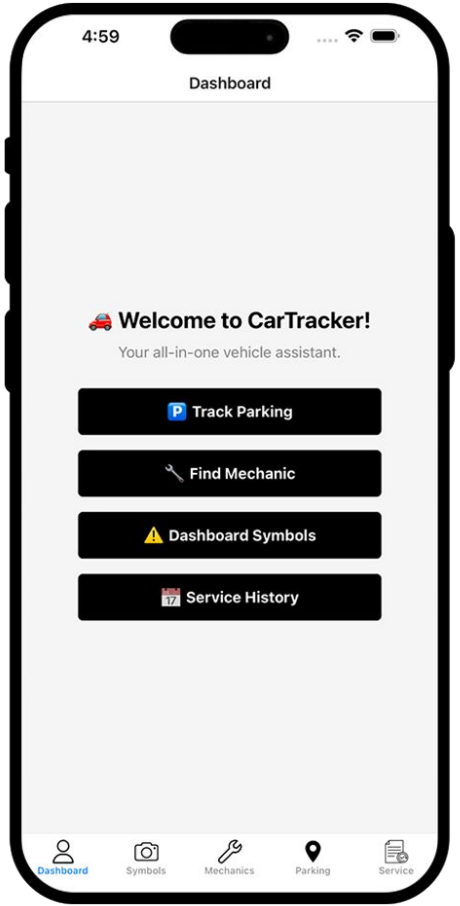
A one-stop mobile app for car owners to simplify the confusing parts of owning a car by bringing them all together in one easy app.

What CarCare helps with:

- Understanding error symbols
- Organizing service records
- Finding a mechanic or performance shop
- Remembering parking location

Why?

Owning a car can be stressful. Existing tools are split across many apps. CarCare aims to make it easier and more manageable.



Architecture

Frontend:
- React Native + Expo

Backend/APIs:
- Google Maps
- Google Cloud Vision
- Vertex AI

Database:
- Local JSON storage

Expo + React Native

Personas & Epics

Forgetful Frank

Wants an easy way to save and find his parking spot.

Chill Guy David

Wants to track his cars service history without hassle.

Stressed Out Sam

Wants quick and clear info about dashboard warning symbols.

Danger Danny

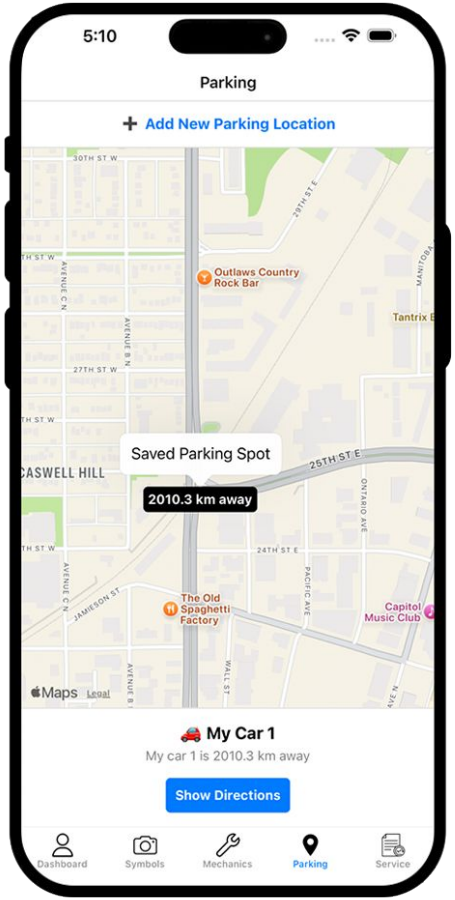
Wants to find nearby, reliable mechanics fast.

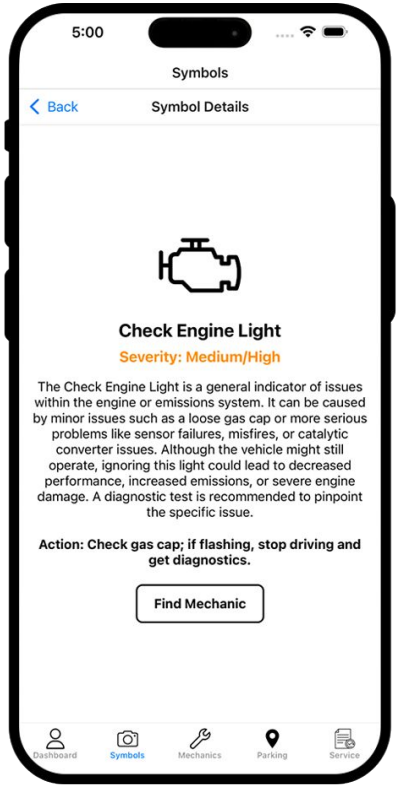
Racer Randy

Wants to locate performance shops and parts easily.

Forgetful Frank

“As Forgetful Frank, I want to save my parking location on a map so that I can access it later to find my car.”



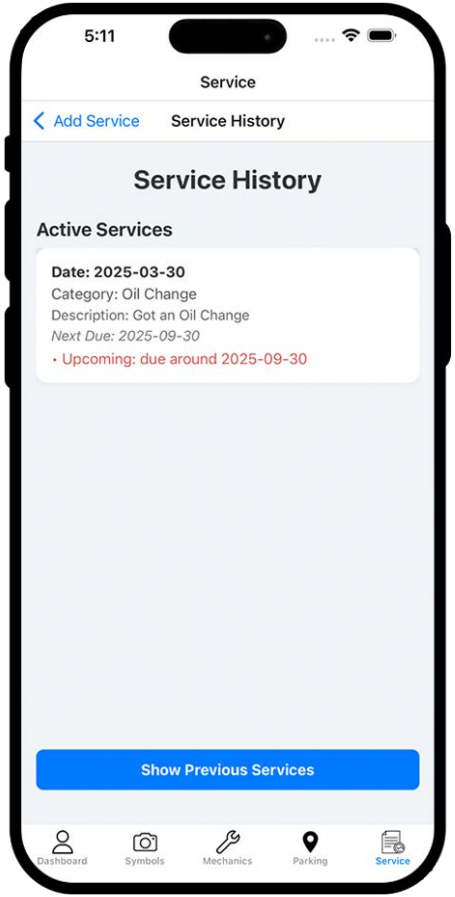


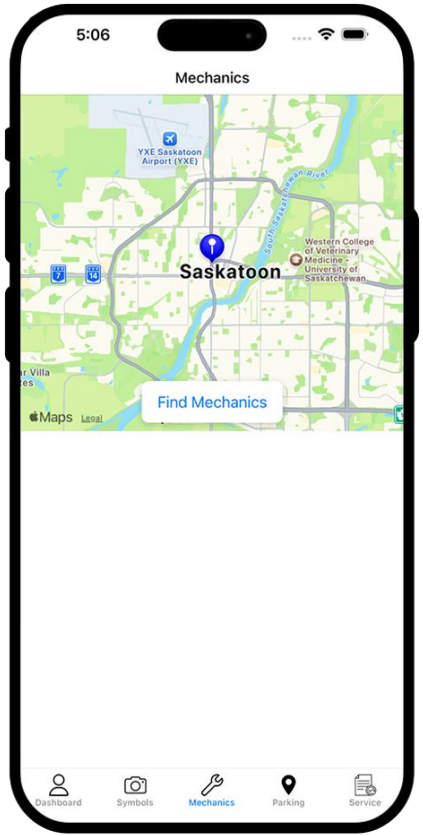
Stressed Out Sam

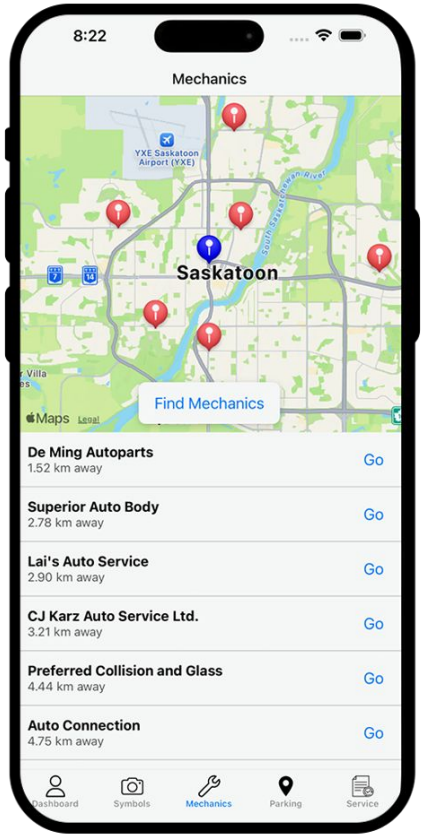
"As Stressed Out Sam, I want to quickly identify a dashboard warning symbol so that I can understand the issue and take the necessary action."

Chill Guy David

“As Chill Guy David, I want to view my car’s service history so that I can feel like a responsible car owner.”





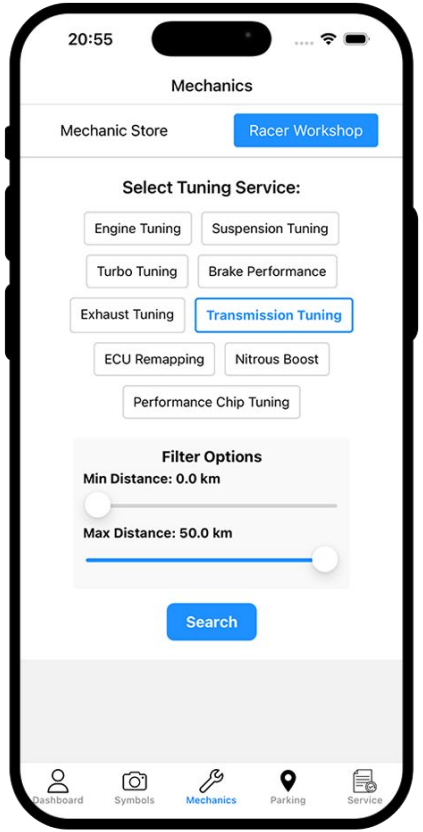


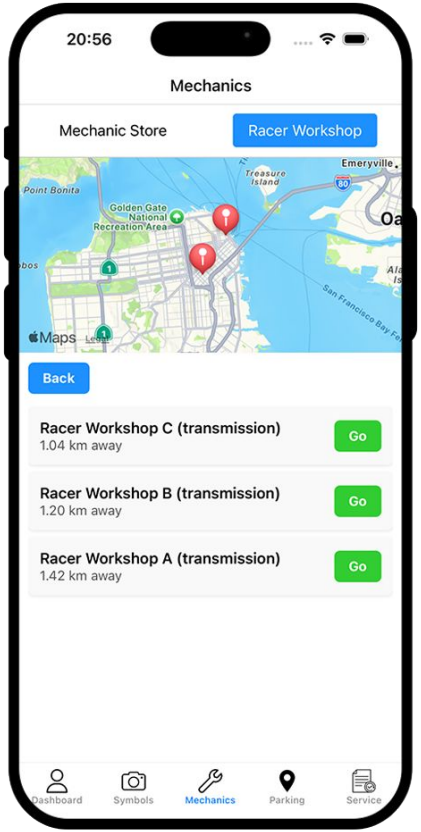
Danger Danny

"As Danger Danny, I want to view a list of nearby mechanics based on my current location so that I can choose a reliable and convenient repair option."

Racer Randy

As Racer Randy, I want to view a list of performance shops nearby so that I can choose the best service workshop based on the part that needs to be repaired.

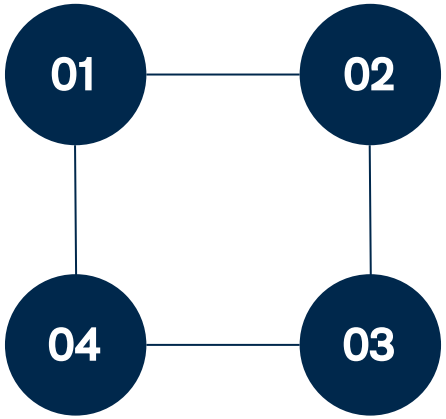




Quality Assurance Plan

Manual Testing

- Walked through the full app flow to test individual features and how they work together
- Used console logs to trace and fix issues
- Ensured smooth user experience



Automated Testing

- Used Jest with React Native Testing Library
- Tested components functionality
- Checked screen rendering, search bar behaviour, and screen navigation
- Helped confirm expected behaviour

Next Steps

Polish UI and transitions.

Firebase integration for service history sync and user data.

Increase car and symbol database.

Thanks for listening!
